

IKRAM SATTAR

Full Stack Developer | Software & Application Development

Kowloon, Hong Kong • +852 5449 0537 • sattarikram81@gmail.com

[ikram-portfolio-gamma.vercel.app](#) • github.com/ikram-git • linkedin.com/in/ikram-sattar

PROFESSIONAL SUMMARY

Full Stack Developer with 3 years of production experience and a BSc in Computer Science. Skilled across Java/Spring Boot, .NET, React/Next.js, TypeScript, Python, and Flutter, with end-to-end delivery experience spanning microservices, mobile applications, AWS CI/CD pipelines, and cross-region deployments. Written case studies for the systems below are linked throughout.

PROFESSIONAL EXPERIENCE

Toppan Security

Full Stack Developer

Hong Kong

January 2024 – Present

- Shipped a public-facing application portal end-to-end — React/Next.js (TypeScript) frontend, C#/.NET backend, and Java/Spring Boot microservices on PostgreSQL exposing secure REST APIs for high-throughput inter-service data exchange.
- Engineered a secure Flutter/Dart mobile application for passport and identity document reading, implementing ICAO authentication and encryption protocols (BAC, PACE/SAC) for international identity verification compliance.
- Built and maintained AWS CI/CD pipelines with Jenkins and Docker, automating build, test, and deployment to accelerate release cycles and reduce production incidents.
- Led system deployment across the MEA region in partnership with PMs, QA, infrastructure teams, and clients; provided L2/L3 production support and root-cause analysis under tight SLAs.
- Integrated AI-assisted development tools (Claude Code, Amazon Q) into the daily workflow to accelerate feature delivery and code review while maintaining code quality and test coverage.

The Hong Kong Polytechnic University

Software Developer (Part-time)

Hong Kong

October 2025 – Present

- Built an end-to-end LLM-powered Solidity smart contract auditor (Python/FastAPI + React) with a Retrieval-Augmented Generation (RAG) pipeline and vector database to ground vulnerability detection in documented exploit patterns.
- Engineered a Solidity processing pipeline (solc / py-solc-x) to compile and extract bytecode and ABIs from 18 million raw smart contracts, deduplicating identical bytecode into a curated evaluation set.
- Developed the React/Next.js frontend for a stablecoin compliance platform delivering real-time on-chain transaction monitoring, wallet risk scoring, and AML alerts for illicit-activity exposure.

FDM Group

Software Developer Trainee

Hong Kong

July 2023 – December 2023

- Completed pre-deployment software engineering training covering UNIX, OOD in Java (Git, Maven), JDBC and JPA/Hibernate, the Spring Framework, and web development.

FWD Insurance

Summer Intern

Hong Kong

June 2022 – August 2022

- Wrote shell scripts for job scheduling in Control-M; carried out software testing and issue reporting in Jira.

PROJECTS

Briva — AI Meeting Notes Platform (Founder / Solo Engineer) • meetbriva.com • [Case study ↗](#)

Production SaaS that transcribes and summarises professional meetings with automated action-item extraction and Google Calendar integration. Built on Next.js, Express, TypeScript, Supabase, and Tailwind, with an STT adapter pattern (Deepgram, Google Cloud STT) and Claude for summarisation.

Blockchain-Based E-Commerce Platform (BSc Final Year Project) • [GitHub](#) • [Case study ↗](#)

Designed and shipped an Ethereum-integrated e-commerce application with smart contracts enabling cryptocurrency payments at checkout. Stack: Solidity, React.js, Web3.js.

Multi-Threaded Elevator Control System (Java)

Elevator control simulation in Java built around multithreading — concurrent request handling across multiple elevator threads with thread-safe scheduling and synchronised access to shared state.

EDUCATION

The Hong Kong Polytechnic University

BSc (Hons), Computer Science

Hong Kong

September 2019 – June 2023

Relevant coursework: Computer Systems Security, Operating Systems, Machine Learning, Cloud Computing, Database Systems, Software Engineering.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Java, Python, C#, Dart, C, SQL

Frontend: React, Next.js, React Native, Flutter, Tailwind CSS, HTML, CSS

Backend: Spring Boot, .NET, Node.js, Express, FastAPI, REST APIs, Microservices

Data & Storage: PostgreSQL, MySQL, Supabase, Vector Databases

Cloud & DevOps: AWS, Docker, Jenkins, Git, CI/CD, Linux / Shell Scripting

Security & AI: BAC, PACE/SAC, ICAO standards, Solidity, Smart Contracts, LLMs, RAG pipelines, Machine Learning, AI-assisted development (Claude Code, Amazon Q)
